VERSION

1.0 · 2026

The platform *posture.*

TechSur presents as a serious, AI-native federal engineering firm. The brand is built on stark contrast — near-black canvases, a single confident gold, and oversized typography — signaling technical conviction and government-grade trust without corporate blandness.

Positioning lockup

The master idea is a two-word, two-tone headline: a hard sans statement paired with a softer serif-italic answer. It appears as the company signature.

AI-Native.
Mission-Ready.

The brand pillars

AI woven in, not bolted on

AI is presented as infrastructure at every layer, never a feature bolt-on.

Government-grade credibility

Vehicles, certifications, and agency trust shown as monospace fact strips.

Mission impact, measured

Outcomes lead: faster ATO, lower wait time, fraud recovered, audit-ready.

Boutique conviction

"Passionate Technologists" — confident, plain-spoken, never bureaucratic.

Signature outcome band

Hard metrics rendered in gold on black are a recurring brand device. Always lead with the number.

<9 mo

FASTER ATO

–44%

CITIZEN WAIT

\$3.2M

FRAUD RECOVERED

100%

AUDIT-READY

–60%

TIME-TO-MISSION

One gold. *Deep black.*

The palette is disciplined: a warm gold as the single brand accent, a near-black foundation, and a warm bone/paper for light surfaces. Restraint is the point — gold is used sparingly so it always reads as emphasis.

Core colors

Black

#0A0A0A

Primary canvas, hero & footer.

Gold 400 — Primary

#FBCA5C

CTAs, accents, key headline word.

Gold 500

#E6B040

Serif accents on light bg.

Gold 600

#B0832A

Eyebrows, links on paper.

Bone

#FAFAF7

Light page canvas.

Paper

#F5F5F2

Alt light surface / cards.

Ink

#1A1A1A

Body text on light.

Gray 400

#A8A59B

Mono micro-labels, muted text.

Gold ramp

Neutral ramp

DO

- Keep gold to ~10% of any view — accents only.
- Pair gold with black or bone for max contrast.
- Use the warm neutrals; avoid pure cool grays.

DON'T

- Fill large areas with gold except the CTA band.
- Introduce a second accent hue.
- Put Gold 400 text on bone (fails contrast) — use 600.

Four voices, *one system.*

Type does the heavy lifting. A heavy geometric sans shouts; a serif italic answers; a humanist sans carries the reading; a monospace stamps the facts.

One picture.

MONTERRAT · DISPLAY · 800–900 WEIGHT · TIGHT TRACKING (–2 TO –5PX) · HEADLINES & THE "AI-NATIVE" LOCKUP

Five layers.

FRAUNCES · SERIF ACCENT · ITALIC · THE SECOND-LINE "ANSWER" WORD & EMPHASIS (E.G. *AI WOVEN IN*)

We build, secure and operate the platforms federal missions run on.

OPEN SANS · BODY · 400 / 600 / 700 · ALL RUNNING TEXT & LEAD PARAGRAPHS

UEI: NAQUNHC61KN9 · CAGE: 81J81 · SBA 8(A)

JETBRAINS MONO · LABELS · 400–500 · UPPERCASE · EYEBROWS, FACT STRIPS, NAV MICRO-LABELS, BADGES

Type scale & usage

ROLE	FAMILY	WEIGHT	SIZE / TRACKING	CASE
Hero H1	Montserrat	900	~132px / –5.3px	Sentence
Section H2	Montserrat	900	~84px / –3.4px	Sentence
Accent word	Fraunces	400–600 italic	matches H1/H2	Sentence
Card heading	Montserrat	800	~22px / –0.2px	Sentence
Body / lead	Open Sans	400	~18–22px	Sentence
Eyebrow / label	JetBrains Mono	400–500	~11px / +1–2px	UPPER
Button	Montserrat	700	~12–13px / +1px	UPPER

Eyebrows often carry a leading em-dash and dot index: — THE FRAMEWORK · MISSION IMPACT · L5

The wordmark & mark.

The identity is a typographic wordmark — "TechSur" in heavy Montserrat — followed by a small gold dot and the monospace descriptor "Passionate Technologists."

On dark (primary)

On light

The "AI" badge mark

A gold circular "AI" token recurs as the brand's iconographic device — at the center of the capability diagram and as the nav home glyph. It signals "AI at the core."

Gold disc · black "AI" · used as the core node and the **AI**-native capability badge throughout the site.

DO

- Keep the gold dot between wordmark and descriptor.
- Use white wordmark on black, ink on bone.
- Give the lockup clear space — no crowding.

DON'T

- Recolor the wordmark in gold.
- Set the descriptor in anything but mono caps.
- Stretch, outline, or add shadow to the mark.

Buttons, badges, *surfaces*.

Buttons

Sharp corners (2px radius), Montserrat 700, uppercase, +1px tracking. Arrows (→) and down-carets (↓) signal action vs download.

VARIANT	FILL	TEXT	USE
Primary	Gold 400	Black	Main CTA on dark/light
Inverse	Black	Gold 400	CTA on a gold band
Ghost	Transparent	Ink/Black	Secondary action

Eyebrows, badges & fact strips

— THE FRAMEWORK **AI** SBA 8(a) · WOSB · ISO 27001 · CMMI

Certifications and identifiers always appear in mono caps, dot-separated, in gray — never as marketing copy.

Surfaces & radii

TOKEN	VALUE	TOKEN	VALUE
Radius xs–xl	2 / 4 / 6 / 8 / 12px	Shadow sm	0 1px 2px /4%
Spacing 1–10	4 → 128px (4,8,12,16,24,32,48,64,96,128)	Shadow lg	0 20px 50px /12%
Ease-out	cubic-bezier(.2,0,.2,1)	Ease-in-out	cubic-bezier(.4,0,.2,1)

Section rhythm

Pages alternate **black** → **bone** → **black** → **white** → **gold band** → **black footer**. Alternating canvas is the core layout signature; the single gold band near the close is the conversion moment.

How TechSur *sounds*.

Confident, compressed, and outcome-first. Sentences are short. Claims are backed by a number or a vehicle. The serif italic adds a human, almost editorial warmth against the technical sans.

Principles

Lead with the outcome. "<9 mo faster ATO," not "we help accelerate authorization timelines."

AI as posture, not pitch. "AI woven in at every layer, not bolted on."

Two-beat headlines. A hard statement, then a softer serif answer: *We've got the framework.*

Facts in mono. Vehicles, certs, and IDs are stated plainly, never embellished.

Plain over bureaucratic. "Got a mission?" beats "Engage our solution portfolio."

Signature phrases

AI-Native. Mission-Ready.

AI at every layer

Outcomes that matter
